

README File for

Spatial Clustering of Natural Disasters, Selection in Migration, and Economic Outcomes

Junni Pan

This README outlines the procedures for replicating the project. Below is an overview:

- **Computational Requirements.** See Table 1.
- **Summary of Raw Data.** Table 2 summarizes the raw data and provides instructions for obtaining them.
- **Preliminary Cleaning Sequence.** Table 3 details the inputs, procedures, and outputs, presented in the order to be executed.
- **Construction of Analysis Datasets and Generation of Results.** Table 4 provides instructions on how to generate the analysis datasets and the results.

Table 1: Computational Requirements

Program	Version last run	Update paths in
Python	Python 3.13.2; run from Bash on a Linux-based operating system. Python routines are invoked within Bash scripts.	<code>Codes/cleaning_rainfall.sh</code> , <code>Codes/cleaning_temperature</code> <code>.sh</code> .
ArcGIS (with Spatial Analyst)	ArcGIS Pro 3.2.2; Windows 11.	Set paths as indicated in the replication steps.
Stata	Stata SE 19; Windows 11.	<code>Codes/_master.do</code> .

Table 2: Summary of Raw Data

Data File	Source	Access	Instructions
<i>Main Data</i>			
Data/Censuses/Raw/ce nsus2000.dta	National Bu- reau of Statis- tics (NBS)	Confidential	
Data/Censuses/Raw/ce nsus2005.dta	NBS	Confidential	
Data/Rainfall/Input/ FLDAS_NOAH01_C_GL_M. A198201.001.nc.SUB.n c4, . . . , FLDAS_NOAH01 _C_GL_M.A202212.001. nc.SUB.nc4	NASA (McNally and NASA/GSFC/HSL, 2018)	Public	Data are available at https://disc.gsfc.nasa.gov/datasets/FLDAS_NOAH01_C_GL_M_001/summary . Register and log in. Click <i>Subset / Get Data</i> . Download the subset of rainfall data for 01/1982–12/2022 with region coordinates (4°N, 73°E, 55°N, 136°E), broadly covering mainland China.
Data/NTL/Input/F1420 00.v4b_web.stable_li ghts.avg_vis.tif, F1 52000.v4b_web.stable _lights.avg_vis.tif, F152005.v4b_web.stab le_lights.avg_vis.ti f, F162005.v4b_web.st able_lights.avg_vis. tif	NOAA DMSP- OLS (Version 4)	Public	Data are available at https://ngdc.noaa.gov/eog/dmsp/downloadV4composites.html . Download F142000, F152000, F152005, F162005. Unzip the data.
Data/Temperature/Inp ut/Original/tmn*.nc, tmp*.nc, tmx*.nc	Peng et al. (2019)	Public	Data are available at https://zenodo.org/records/3185722 . Download the files <i>tmn*.nc</i> , <i>tmp*.nc</i> , <i>tmx*.nc</i> for years 1991–2005.

Data File	Source	Access	Instructions
Data/Map/County_2000 .shp	Imbert et al. (2022)	Public	Available at Data/Public/Raw/Administrative in their replication package.
Data/Pop/pop2000(*.adf), Data/Pop/pop2005(*.adf)	Chinese Academy of Sciences	Proprietary	Data are available at https://www.resdc.cn/doi/doi.aspx?DOIid=32 . Register and log in to download.
Data/GDP/gdp2005.dta, Data/GDP/gdp2000.dta	China County Statistical Yearbook (2001, 2006) and provincial yearbooks	Proprietary	County-level GDP data are accessible through the libraries of most Chinese universities.
<i>Data Used Only in the Online Appendix</i>			
LandUse/LandUse1990_hk.dta	Chinese Academy of Sciences	Proprietary	Data are available at https://www.resdc.cn/doi/doi.aspx?DOIid=54
census64.shp, census82.shp, census90.shp	NBS	Confidential	

Table 3: Preliminary Cleaning Sequence

Item	Details
<i>Step 1: Preliminary cleaning of rainfall data — Part 1</i>	
Program	Python, run from Bash.
Input	Data/Rainfall/Input/FLDAS_NOAH01_C_GL_M.A198201.001.nc.SUB.nc4, . . . , FLDAS_NOAH01_C_GL_M.A202212.001.nc.SUB.nc4.
Instructions	(1) Change directory to the Codes folder. (2) Run <code>chmod +x cleaning_rainfall.sh</code> to make the script executable. (3) Run <code>./cleaning_rainfall.sh</code> . For details on the package used to produce SPI, see Adams (2017).
Purpose	Generate SPI and mask wet and dry disasters using a 1/0 indicator.
Output	Data/Rainfall/Output/FLDAS_ExtremeWet_xsd.nc, Data/Rainfall/Output/FLDAS_ExtremeDry_xsd.nc, where $x \in \{14, 15, 16, 165, 17, 18\}$.
<i>Step 2: Preliminary cleaning of rainfall data — Part 2</i>	
Program	ArcGIS.
Input	Data/Rainfall/Output/FLDAS_ExtremeWet_xsd.nc, Data/Rainfall/Output/FLDAS_ExtremeDry_xsd.nc, where $x \in \{14, 15, 16, 165, 17, 18\}$.
Instructions	(1) Use Make NetCDF Raster ; set Band Dimension = time . (2) Download NetCDF_time_slice_to_Raster from here ; connect to the folder containing the tool, run it, and save outputs to the corresponding folders Data/Rainfall/xsd/FLDAS_d_monthly_xsd/d1_288_xsd, where $d \in \{Wet, Dry\}$, and $x \in \{14, 15, 16, 165, 17, 18\}$.
Purpose	Slice the inputs into monthly rasters.

continued on next page

Item	Details
Output (provided)	Data/Rainfall/ <i>xsd</i> /FLDAS_Wet_monthly_ <i>xsd</i> /Wet1_288_ <i>xsd</i> / <i>Band_y.tif</i> , Data/Rainfall/ <i>xsd</i> /FLDAS_Dry_monthly_ <i>xsd</i> /Dry1_288_ <i>xsd</i> / <i>Band_y.tif</i> , where $x \in \{14, 15, 16, 165, 17, 18\}$ and $y \in \{1, 2, \dots, 288\}$.
<i>Step 3: Preliminary cleaning of rainfall data — Part 3</i>	
Program	ArcGIS.
Input (provided)	Data/Rainfall/ <i>xsd</i> /FLDAS_Wet_monthly_ <i>xsd</i> /Wet1_288_ <i>xsd</i> / <i>Band_y.tif</i> , Data/Rainfall/ <i>xsd</i> /FLDAS_Dry_monthly_ <i>xsd</i> /Dry1_288_ <i>xsd</i> / <i>Band_y.tif</i> , where $x \in \{14, 15, 16, 165, 17, 18\}$ and $y \in \{1, 2, \dots, 288\}$.
Instructions	(1) In the Catalog pane: right-click Toolboxes → Add Toolbox; add Codes/cleaning_CountyStat_tool.atbx. (Corresponding Python codes are in Codes/cleaning_CountyStat_tool.py). (2) Right-click the toolbox and choose Edit. Update the input path to the input data location and set the output path to the output folder Data/Rainfall/ <i>xsd</i> /FLDAS_ <i>d</i> _monthly_csv_ <i>xsd</i> , where $d \in \{\text{Wet, Dry}\}$ and $x \in \{14, 15, 16, 165, 17, 18\}$.
Purpose	Generate county-level average disasters.
Output (provided)	Data/Rainfall/ <i>xsd</i> /FLDAS_Wet_monthly_csv_ <i>xsd</i> /WetBand_ <i>y_xsd.csv</i> , Data/Rainfall/ <i>xsd</i> /FLDAS_Dry_monthly_csv_ <i>xsd</i> /DryBand_ <i>y_xsd.csv</i> , where $x \in \{14, 15, 16, 165, 17, 18\}$ and $y \in \{1, 2, \dots, 288\}$.
<i>Step 4: Preliminary cleaning of temperature data — Part 1</i>	
Program	Python, run from Bash.
Input	Data/Temperature/Input/Original/tmn*.nc, tmp*.nc, tmx*.nc.
Instructions	(1) Change directory to the Codes folder. (2) Run <code>chmod +x cleaning_temperature.sh</code> to make the script executable. (3) Run <code>./cleaning_temperature.sh</code> .

continued on next page

Item	Details
Output	Data/Temperature/Output/tmn_mean_x.nc, Data/Temperature/Output/tmp_mean_x.nc, Data/Temperature/Output/tmx_mean_x.nc, where $x \in \{1992-1996, \dots, 2001-2005\}$.
<i>Step 5: Preliminary cleaning of temperature data — Part 2</i>	
Program	ArcGIS.
Input	Data/Temperature/Output/tmn_mean_x.nc, Data/Temperature/Output/tmp_mean_x.nc, Data/Temperature/Output/tmx_mean_x.nc, where $x \in \{1992-1996, \dots, 2001-2005\}$.
Instructions	Same as Step 3, use the tool Codes/cleaning_CountyStat_tool.atbx.
Purpose	Generate county-level average temperature.
Output (provided)	Data/Temperature/Temperature_csv/tmn_mean_x.csv, Data/Temperature/Temperature_csv/tmp_mean_x.csv, Data/Temperature/Temperature_csv/tmx_mean_x.csv, where $x \in \{1992-1996, \dots, 2001-2005\}$.
<i>Step 6: Preliminary cleaning of nighttime lights data</i>	
Program	ArcGIS.
Input	Data/NTL/Input/F142000.v4b_web.stable_lights.avg_vis.tif, F152000.v4b_web.stable_lights.avg_vis.tif, F152005.v4b_web.stable_lights.avg_vis.tif, F162005.v4b_web.stable_lights.avg_vis.tif.
Instructions	(1) Map → Layer → Add Data to add the input. (2) Run Zonal Statistics as Table (Spatial Analyst Tools) with: Input Raster or Feature Zone Data = County_2000; Zone Field = CNTYGB; Input Value Raster = (the input); Statistics Type = Sum. (3) Data → Export Table. Export as .csv and save to the output path Data/NTL/Output.

continued on next page

Item	Details
Output (provided)	Data/NTL/Output/F142000.csv, Data/NTL/Output/F152000.csv, Data/NTL/Output/F152005.csv, Data/NTL/Output/F162005.csv.
<i>Step 7: Preliminary cleaning of population data</i>	
Program	ArcGIS.
Input	Data/Pop/pop2000(*.adf), Data/Pop/pop2005(*.adf).
Instructions	(1) Follow the same procedure as Step 6.
Output	Data/Pop/Output/pop2000_sum.csv, Data/Pop/Output/pop2005_sum.csv.
<i>Step 8: Preliminary cleaning of distance data</i>	
Program	ArcGIS.
Input	Data/Map/County_2000.shp.
Instructions	(1) Map →Layer →Add Data to add the input. (2) Right-click to open the Attribute Table. (3) Add fields cen_x and cen_y. For cen_x: Calculate Geometry →Centroid x-coordinate; for cen_y: Calculate Geometry →Centroid y-coordinate. (4) Data →Export Table. Export as .csv to the output path Data/Distance.
Output (provided)	Data/Distance/cnty2000_cenxy.csv

Table 4: Construction of Analysis Datasets and Generation of Results

Item	Details
Program	Stata
Input	Outputs from Steps 3, 5, 6, 7, and 8 in Table 3.
Instructions	Run Codes/_master.do.
Output	
<i>Main data</i>	Data/1.Panel/panel0005.dta, Data/1.Panel/panel0005_age_hete.dta, Data/1.Panel/panel0005_sex_hete.dta, Data/1.Panel/panel0005_edu_hete.dta, Data/1.Pooled/pooled0005.dta.
<i>Data used only in the online appendix</i>	Data/1.Panel/panel0005_stu.dta, Data/1.Panel/panel0005_ruralhk.dta, Data/1.Panel/panel0005_differentlags_xsd, where $x \in \{14, 15, 16, 165, 17, 18\}$.
<i>Tables</i>	Section 3: Table 1. Section 4: Tables 2–3; Table B1. Section 5: Table 4; Tables A1–A2, B2–B8. Section 7: Tables B9–B11.
<i>Figures</i>	Section 5: Figure 1; Figure B3. Section 7: Figures 3–4; Figure B4. Section 3 Figure B1 and Section 4 Figure B2 are produced based on Data/Map/County_2000.shp as well as data included in the folders Data/Rainfall/DataforFigureB1B2 (provided). Details on reproducing the exact display formats are available upon request.
